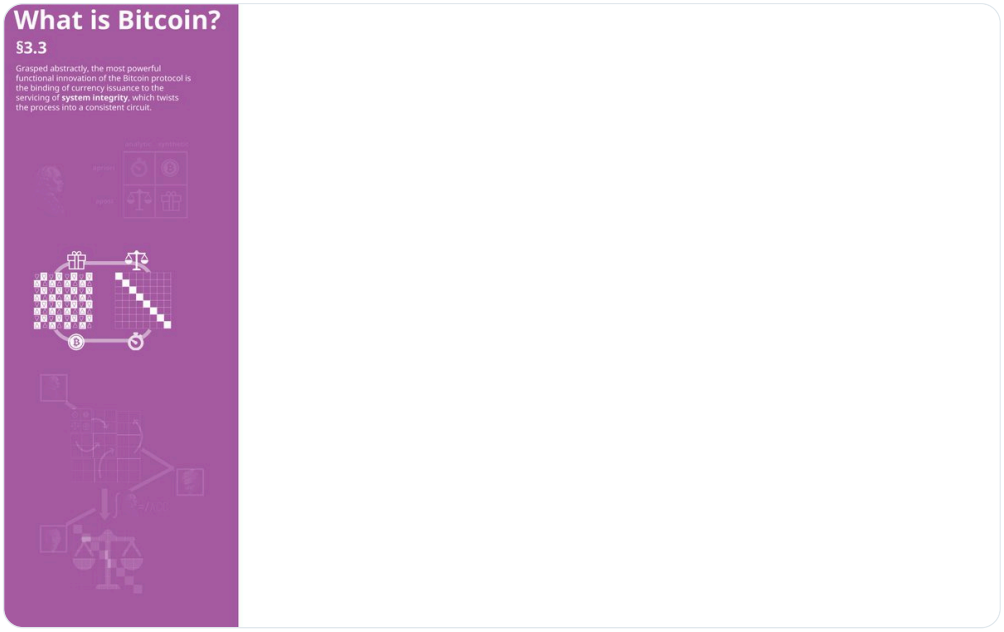
§3.331
Any solution to the Kantian matrixial dialectic needs to not only enumerate or materialize possible solutions, but the halting condition for the problem rests on the liquidity (deparametrization) of the problem space.

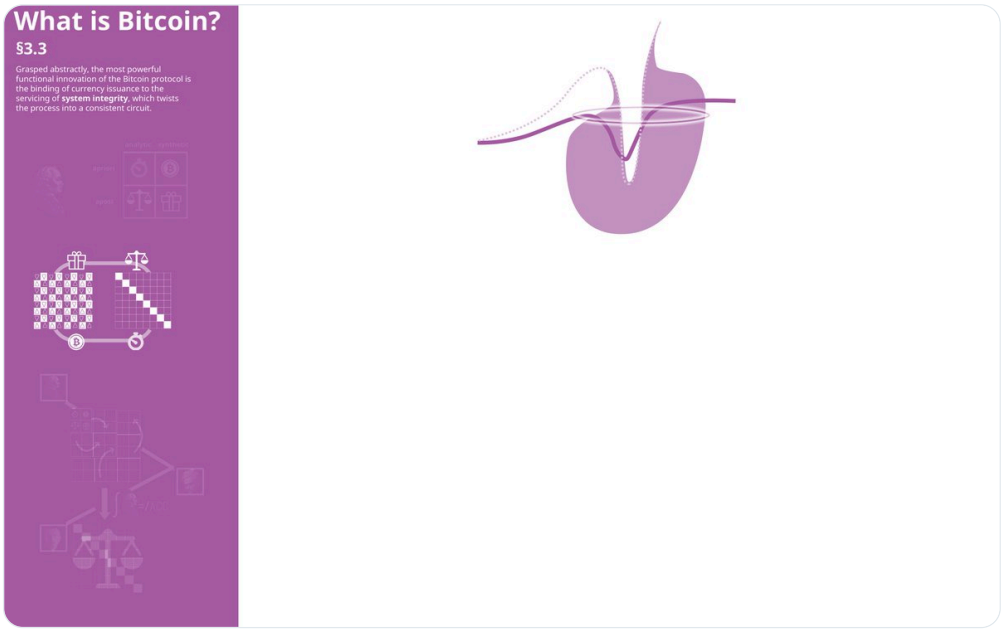
#cryptocurrent #cryptocene #nickland



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.332

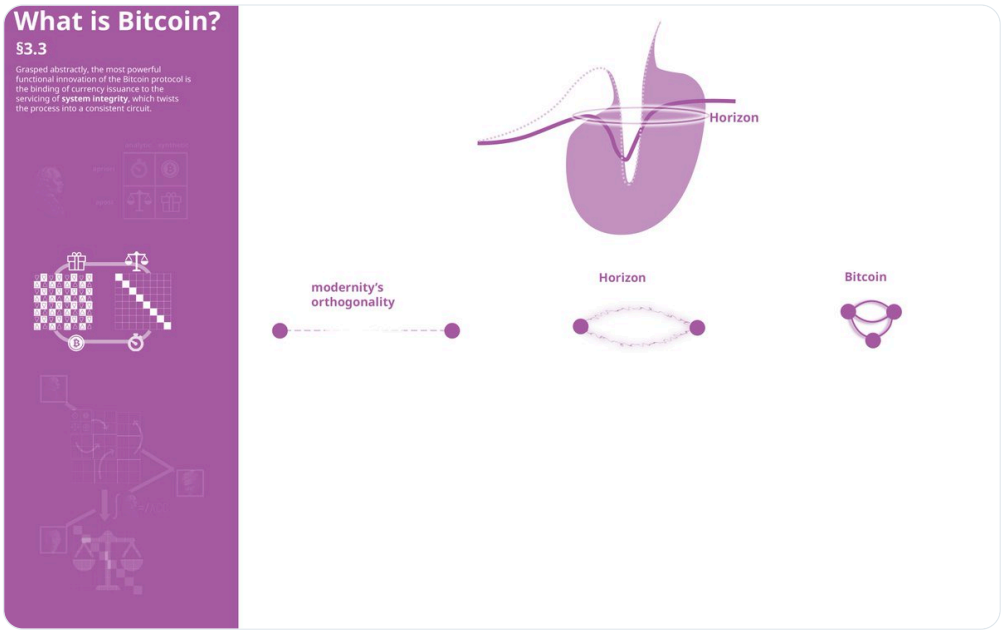
Modernity provides a natural acceleration toward the solution, and we highlight only a horizon marking the entrance and exit boundary condition that would qualify as a true escape from it. This natural historical progression can be considered thermodynamic. #cryptocurrent



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

§3.3321

The orthogonality (cause-effect )/(means-end) [§3.34] likewise spreads cryptically through out the first arrival of the solution space, diminishing with the passage of time, such that a charge can be detected as the conceptual recursivity converges towards a solution #NN



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

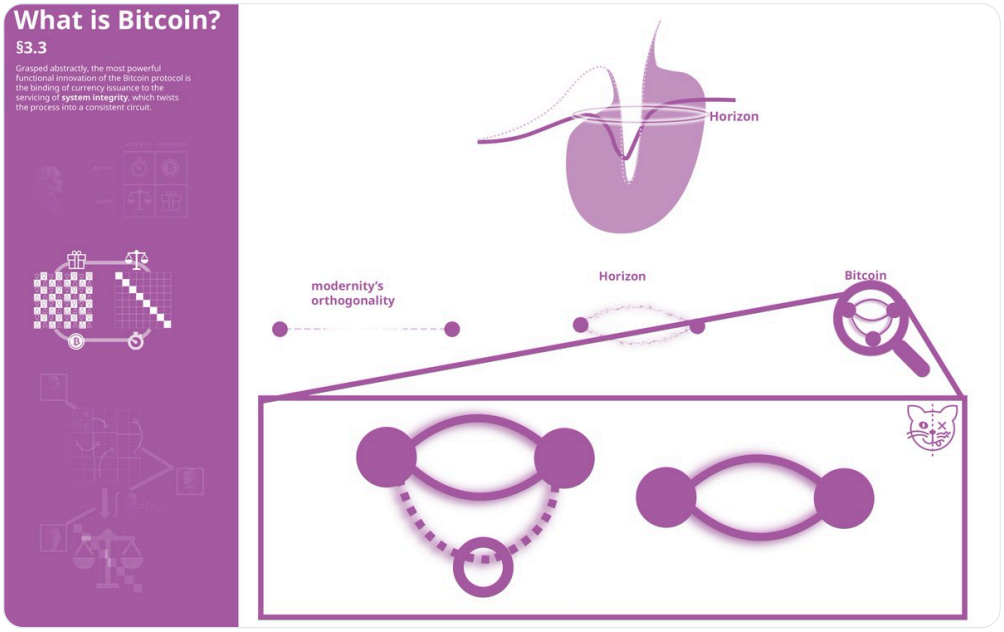
§3.3322

An even stronger claim is not only are the conceptual differences past the horizon strongly bonded via their synthetic materializability but so is their diagrammatology. Conceptual insertions into Bitcoin are quantumly indistinguishable (realizable) from the sol. to DSP.



What is Bitcoin?
§3.3
Grasped abstractly, the most powerful functional innovation of the Bitcoin protocol is the binding of currency issuance to the servicing of system integrity, which twists the process into a consistent circuit.

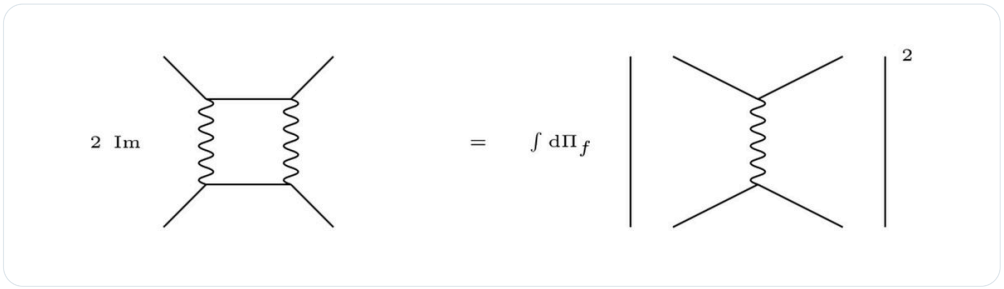
Or to take it from the outside: §3.333

Traversing the Bitcoin space, transcendental and immanent conceptual divisions are folded. Time disappears from being, offshored onto the machine. Price is known apriori and Value is determined-in-the-last-instance.Being vs being collapses



§3.3331
This progression reveals a disintegrating division between the philosophical conceptual barrier, allowing for quantum tunneling in the last instance, the further the distance in the escape from modernity's gravity well

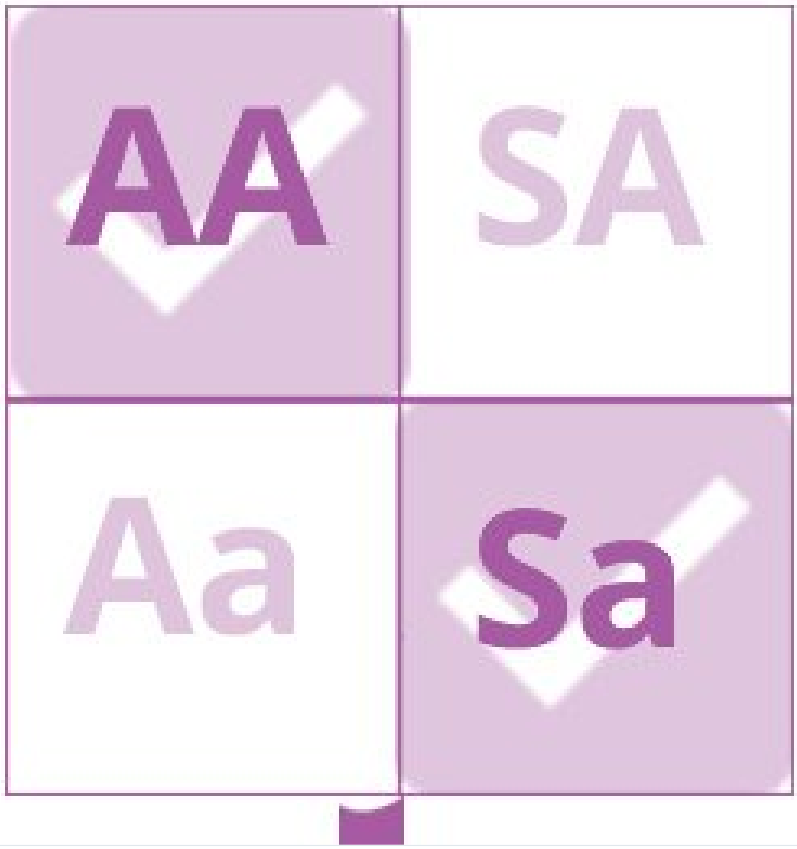
modernity's orthogonality
Horizon
Bitcoin

§3.3332

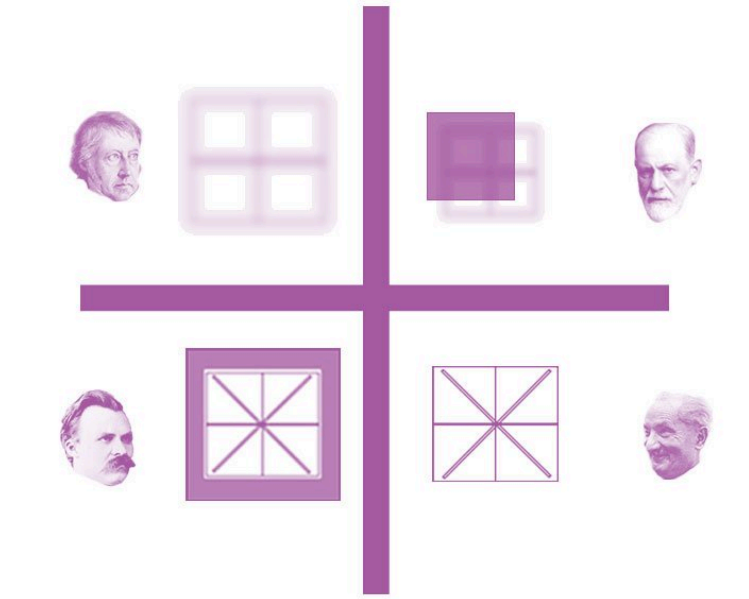
The retroactive selection across philosophical history shows a gradient descent toward the solution, as if being solved by an Outside player. #deepNN

1) Dialectic combin.
2) Random selection (since orthogonal)
3) Conceptual bridging (localization)
4) Indistinguishable

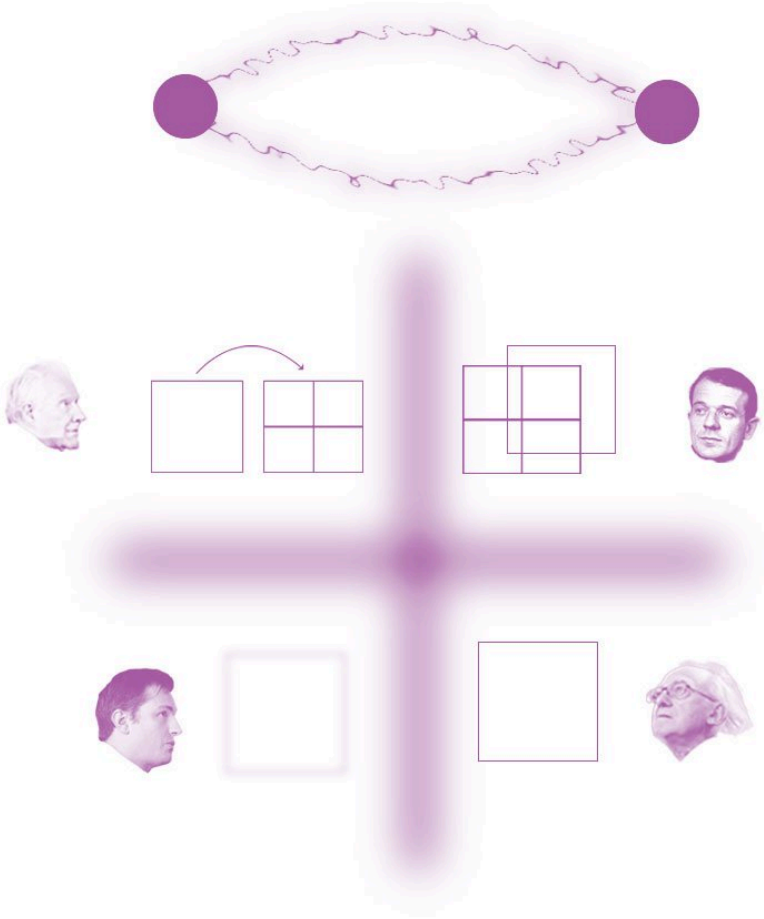
---

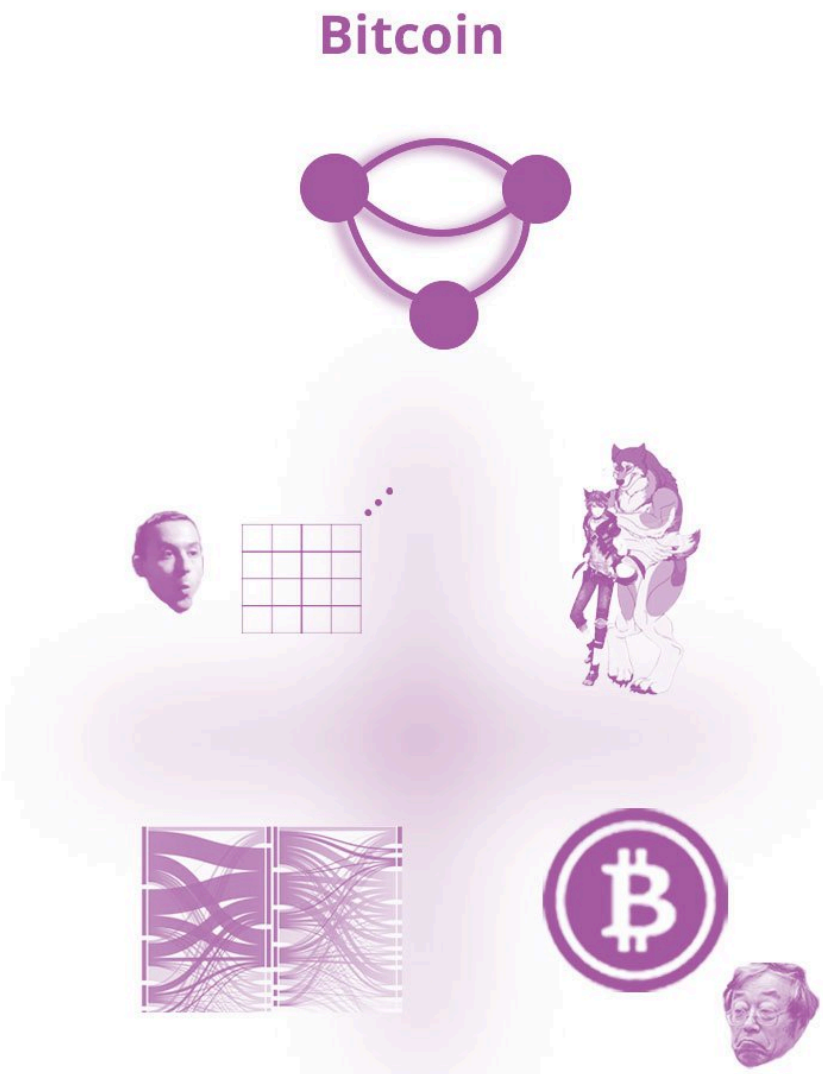


# modernity's orthogonality

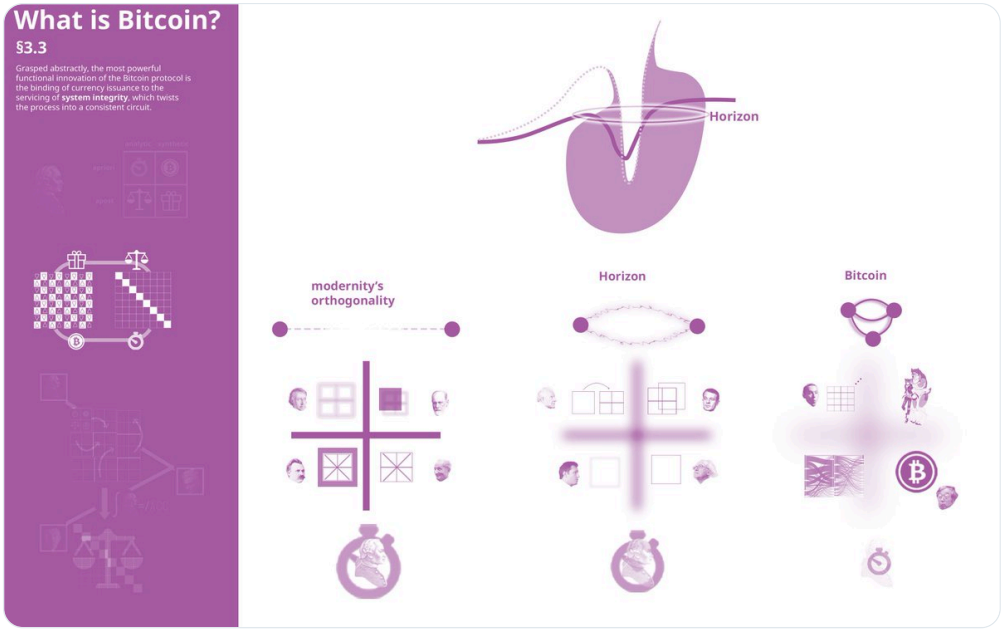


# Horizon





§3.334
It should come as no surprise then that the disappearance of the Kantian problematic (Capitalism as we know it) is correlated to the reduction of time between realizations of the solution. We hazard a guess that infact this time compression is accelerated
#cryptocurrent



What is Bitcoin?

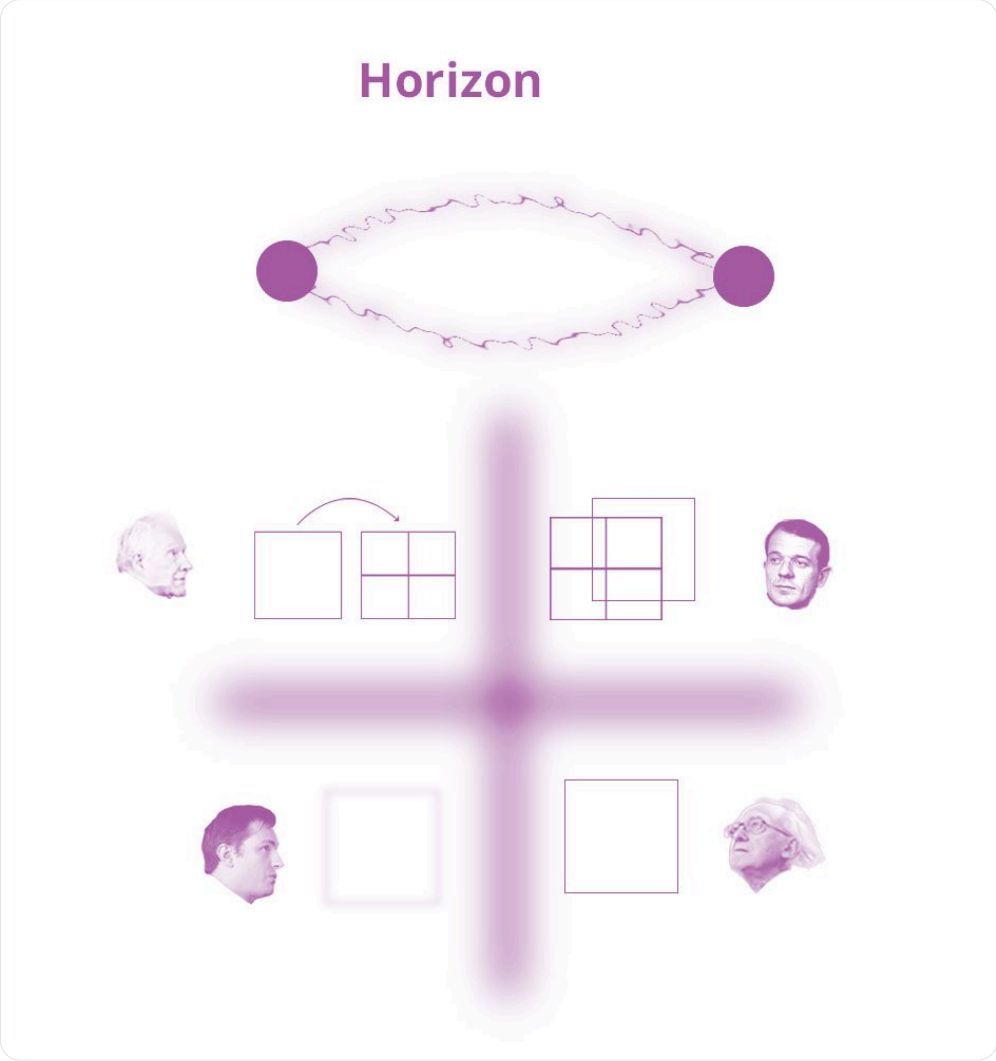
addendum §3.332 (just so you don't think we bushiing)

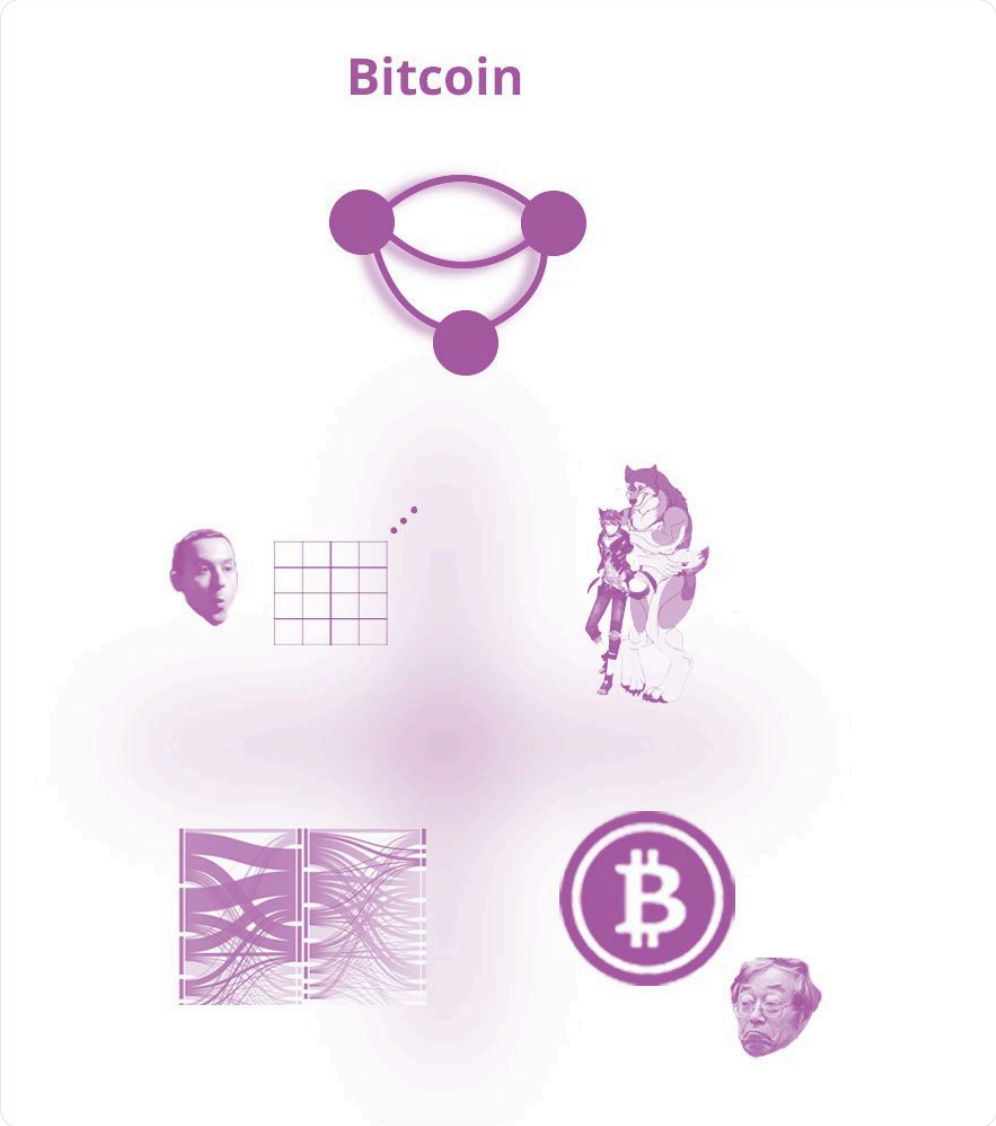
1) Badiou: The void produces multiplicites (AA)
2) Meillassoux: the only universal is contingent (Aa)
3) Deleuze: Virtual actual (SA)
4) Laruelle: The One= the Real (Sa)

These will be retroactively flattened by 🅱️itcoin



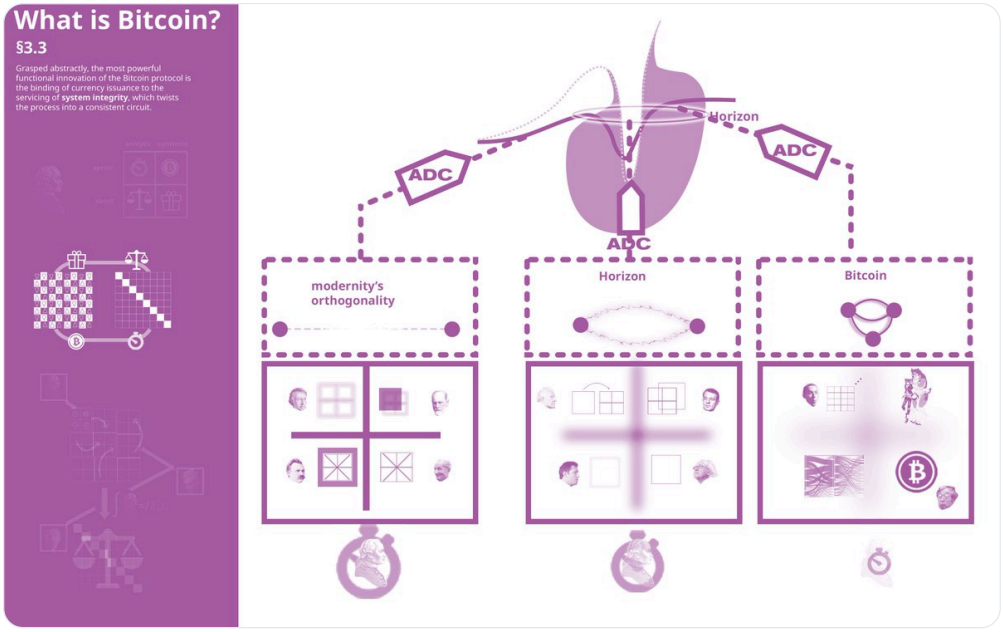
addendum §3.332

1)@UF_blog: Why stop from 0-4, Accelerate the patterns (:).... [AA]
2) Satoshi: Bitcoin indexes and searches/sorts/creates all solutions from root tree [Sa]
3) Gacc: coming up... [SA]
4) Gacc++: coming up... [Aa]



§3.335

Philosophy then emerges as a digital sampling of the conceptual imprint left by the termodynamics of history as surplus product. By digitizing history it encrypts it into a resolution that simulates a thermodynamic conceptual fluidity with a storage space. This is writing.



What is Bitcoin?
